1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Amano and Walton et al are cited as each reference discloses active filter control circuit with constant cutoff frequency control for the active filter.

2. The following is an Examiner's Statement of Reasons for Allowance:

The prior art fails to discloses or suggest an audio signal processor that specifically including a variable filter having specific characteristic and feedback control circuit with a specific selected band of control signal generation as construed and recited in the claims. The prior art also fails to discloses or suggest an audio signal processor that specifically including a variable filter having specific characteristic and feedback control circuit with a digital filter including a LUT (lookup table) for establishing a desired relationship between a quality factor of the digital filter and a detected signal level for feedback control as construed and recited in the claims. Updated search was conducted and two pertinent art references was found as discussed above, but they also fail to disclose or suggest the instant claimed invention.
